Use Case Description	
System: Educational encryption system	
Use Case name: Encrypt Message.	
Primary actor: User	Other actors:
Stakeholders:	
Description: This use case describes the scena	ario where the user encrypts the message.
Relationships	
•Includes:	
Extends:	
Input: Message	
Pre-conditions:	
Steps:	
Actor	System
1. User selects encrypt message.	2. System displays types of encryptions.
3. User selects type of encryption.	4. System asks the user to enter the
	message and the kay.
5. User enters the message and the key.	6. System displays the encrypted
	message.
	7. System asks the user whether he
	wants to save the encrypted message.
8. User enters yes to save the encrypted	
message.	9. System saves the encrypted message
	and shows success message.
Alternative and exceptional flows:	
Post-conditions:
